

GitHub 2.0: The Handoff

Workshop Checklist — The Upskilling Labs

Both partners complete every step!

Before We Start

- ☐ GitHub Desktop is open and signed in
- ☐ VS Code is installed
- ☐ Replit account created (replit.com — use your GitHub email)
- ☐ Replit connected to GitHub (Account → Connected Services → GitHub → Authorize)
- ☐ Sitting with a partner

Round 1 — Build & Ship

~15 minutes — Both partners build at the same time, each on your own Replit account.

Build

- ☐ Filled in Prompt 1 blanks (from GitHub)
- ☐ Pasted prompt into Replit → let Agent build → previewed result
One generation only. Do not iterate — save your daily credits.

Ship

- ☐ Pushed code to GitHub via Replit Git pane (Stage → Commit → Push)
Example repo name: <yourname>-handoff-lab — must be PUBLIC
- ☐ Confirmed code is visible on GitHub.com under main branch
- ☐ Created prompts/scaffold-prompt.md on GitHub.com (Add file → paste prompt → commit)
- ☐ Invited partner as collaborator (Settings → Collaborators → Add people)
- ☐ Accepted MY PARTNER'S collaborator invite (check email or github.com/notifications)

READY? Both partners have a repo on GitHub with a prompt doc, and both invitations are accepted.

Round 2 — Clone, Branch & Edit

~20 minutes — Both partners edit each other's code at the same time.

Set Up

- ☐ Cloned partner's repo in GitHub Desktop (File → Clone)
- ☐ Created branch: feature/<yourname>-edit
Check the top bar in GitHub Desktop. It must NOT say "main."
- ☐ Opened project in VS Code (from GitHub Desktop)
- ☐ Read prompts/scaffold-prompt.md to understand what was built

Edit

Pick **one** from the Change Menu:

- ★ **Text Swap:** Project-wide search (Ctrl/Cmd+Shift+F) → find headline → change it
- ★★ **Add a Card:** Copy an existing card's code block → paste below → edit the text
- ★★★ **AI Color Change:** Ask your AI assistant about the colors → save exchange as prompts/edit-1.md

- ☐ Made my edit and saved (Ctrl/Cmd+S)

Ship

- ☐ Committed with a descriptive message in GitHub Desktop
Example: "Change hero headline — hand-edited"

- ☐ Pushed branch (“Publish branch” button)
- ☐ Opened Pull Request on GitHub.com (yellow banner → “Compare & pull request”)
Title it clearly. One-sentence description of what you changed.

READY? Both partners have an open Pull Request on their partner’s repo.

Round 3 — Review, Merge & Sync

~12 minutes — Switch to YOUR repo. Your partner’s PR is waiting.

- ☐ Opened my partner’s Pull Request on my repo (GitHub.com)
- ☐ Clicked “Files changed” and read the diff (green = added, red = removed)
- ☐ Left at least one comment on a specific line
- ☐ Clicked “Merge pull request” → Confirm → “Delete branch”
- ☐ Pulled merged changes into Replit (Git pane → Pull)

READY? You’ve completed the loop: Builder → GitHub → Partner → Branch → PR → Main → Builder.

The Handoff Protocol

Your build-cycle working agreement. Pin it, print it, screenshot it.

1. **Main should always work.** No direct commits to main.
2. **Branch first, then edit.** Check the branch indicator before you type.
3. **One branch = one person = one task.** Name descriptively: feature/..., fix/...
4. **Every AI-generated feature gets a prompt doc** in /prompts, committed with the code.
5. **Commits say who/how.** Hand-edited vs. AI-generated, and which prompt doc was used.
6. **All changes enter main through a PR.** At least one other teammate reviews first.
7. **Pull before you start; push before you stop.**

Quick Troubleshooting

“I can’t push.” Pull first, then push again.

Editing on main by accident. GitHub Desktop: Branch → New Branch. Changes move automatically.

Can’t find something. Ctrl/Cmd+Shift+F for project-wide search. Check src/pages/ or src/components/.

Collaborator invite is missing. Check spam, or go to github.com/notifications.

Replit won’t sync. Git pane → Pull. Still stale? Make a small commit on GitHub.com to nudge it.

Out of credits. Ask a mentor for help.

Key Shortcuts

Ctrl/Cmd + Shift + F Search all project files (VS Code)

Ctrl/Cmd + S Save

. (period) Press on any GitHub repo page → opens browser-based VS Code (Plan B)

Before Your First Build-Cycle Session

- ☐ One teammate creates the team repo and invites everyone
- ☐ Everyone does a test handoff (one branch + PR per person)
- ☐ Write your scaffold prompt as a team → commit to /prompts
- ☐ Read the Handoff Protocol together, out loud

Questions? Reach Aaron McKeever via Slack or book a drop-in time on Cal.com.
